

Ian McDonald  
CEO, SMX Limited

“ We faced the challenge of moving hundreds of thousands of users onto our hosted email platform. Using audriga's large-scale migration solution, we could easily automate a complex migration workflow that involved multiple processing steps across multiple systems. This helped to ensure a low customer impact and seamless user switchover enabling a robust and high quality transfer of user's emails, address books, calendars, tasks, and account settings

Yvan Knapp  
COO, Hostpoint

“ audriga is our long-standing partner helping customers migrate their existing emails when switching from another provider. Using the automated, self-service migration service, new customers can transfer their old mailboxes easily without any manual effort. audriga's customer onboarding solution contributes towards our goal of providing the best webhosting services in Switzerland.

audriga is a globally recognized expert in email, groupware, and storage migration. We support hosters and telcos of all sizes with white-label self-service customer onboarding and large-scale multimillion account platform migrations. audriga can migrate nearly any kind of data such as files, emails, contacts, calendars, account settings and rules between virtually any type of system.

**Customer onboarding**  
Web-based self-service migration

**Large-scale migrations**  
Switching messaging platforms

**Cross-migration**  
Any data - any system

## EMAIL AND GROUPWARE MIGRATION

## CUSTOMER SELF-SERVICE MIGRATION

A migration can easily be set up by end customers or support staff using our simple, web-based user interface, which also helps tracking migration status. A simple delta migration option is available for a second pass after a domain transfer. For hosters, API access allows for deep integration into the hosting control panel. Our solution can be easily customized and adapted to all of your feature, design, and payment requirements - including complete white-labeling.

## CROSS-MIGRATION

### ANY DATA

Almost any piece of user data, including files, emails, contacts, calendars, tasks, notes, filter rules, and even custom account settings can be migrated. This can even include metadata such as user permissions or tags. If necessary, various kinds of data mappings can be applied during migration.

### ANY SYSTEM

We support data import and export for most popular messaging and groupware systems. Additional connectors can be realized to easily read or write data to custom APIs, databases or file-based data.

## LARGE-SCALE MESSAGING PLATFORM MIGRATION

The audriga migration framework (AMF) has been used to migrate millions of accounts in several large-scale migration projects between different messaging platforms. The framework can orchestrate a seamless user switch by integrating with your infrastructure such as provisioning or proxy systems. Our data connectors help to ensure a high quality transfer of all user data - including IMAP UIDs if desired. A powerful API allows for control and provides monitoring of the migration process.

MIGRATION MADE EASY  
**MOVE YOUR MAILBOX IN  
ONLY THREE SIMPLE STEPS**
